-----

Record offshore wind tenders, surge in storage demand, a floating solar expansion, solar tariffs and more themes to watch in 2025.

O East Asia: Based on the advantages of market, technology, capital, and power interconnection, to ensure reliable power supply and green transition. O Southeast Asia: Building a green, safe, ...

The Asia Pacific region possesses vast, untapped potential for renewable energy, particularly in solar and wind resources. Harnessing ...

Jakarta, 27 May 2025 - As Southeast Asia has the potential to rapidly become a global hub for data centres, solar and wind could power up to 30% of the region's data centres in 2030, ...

Singapore's data centre expansion, Indonesia's WTE reforms, Vietnam's energy mechanisms and Philippines' offshore wind auction.

Faced with energy transition objectives, the ten countries of the Association of Southeast Asian Nations (ASEAN) have technology options to decarbonize power sector. This ...

The focus would be on solar and wind power. The plan also prioritises investments in grid expansion and modernisation, EVs and emerging green technologies.

The Asia Pacific region possesses vast, untapped potential for renewable energy, particularly in solar and wind resources. Harnessing this potential could transform the region's ...

Environmental, Social, and Governance (ESG) considerations are increasingly influencing investment

decisions and corporate strategies within the Asia Pacific wind and solar energy...

Introduction Wind power is fast becoming the next frontier of Asia's clean energy expansion, complementing the region's solar dominance. As turbine technology advances and ...

That figure is forecast to keep rising but will eventually be overtaken by solar PV in 2042 and wind in 2049 under the IEA's "State Policies" scenario.
