What is a solar inverter?

A solar inverter or photovoltaic (PV) inverter is a type of power inverter which converts the variable direct current (DC) output of a photovoltaic solar panel into a utility frequency alternating current (AC) that can be fed into a commercial electrical grid or used by a local, off-grid electrical network.

Which solar panel has a microinverter?

The Q.Trion AC module is actually a solar panel with a built-in microinverter. And, since we named it "Rookie of the Year" in our best solar panels for 2025 ranking, it should come as no surprise that we think they're the best new inverter on the block too. Q Cells is a well-established solar panel manufacturer.

How much does a solar inverter cost?

Inverter costs usually range from \$1,000 to \$3,000, depending on your solar energy system's total power capacity. Three of the most popular options for solar inverters are string inverters, microinverters and solar generators. Microinverters make it much easier to add more solar panels later on.
