-----

I'm trying to set environment variables in docker container during the build but without success. Setting them when using run command works but I need to set them during the build.

I am trying to install Pygame using this: `pip install pygame` and I get this result: "`pip install pygame`  
Collecting pygame Using cached pygame-2.4.0.tar.gz (13.2 MB) Installing ...

On a successful build, I wish to copy the contents of the output directory to a different location under the same "base" folder. This parent folder is a relative part and can vary based on ...

Almost unconsciously I hit the keyboard build macro that builds my entire solution. This can happen just as I notice a code change. The build dominates my computer, and I ...

To run a build task automatically before debugging, you will need to link a build task to your debug config. I'll try to illustrate the process below. First to access your build ...

If the question here is if docker-compose build command, will build a zip kind of thing containing multiple images, which otherwise would have been built separately with usual ...

Build solution will perform an incremental build: if it doesn't think it needs to rebuild a project, it won't. It may also use partially-built bits of the project if they haven't changed (I don't know ...

What are build tools? Build tools are programs that automate the creation of executable applications from source code (e.g., .apk for an Android app). Building incorporates ...

It seems that python setup.py build, sdist or bdist can also build distribution, but I didn't find detailed
