What is the difference between a fuses and a circuit breaker?

Although they work in different ways, fuses and circuit breakers broadly have the same purpose; to protect electrical appliances and electrical circuits from short circuits, and excessive current (called overcurrent or overload). Fuses are relatively low cost electrical safety devices.

What are the different types of circuit breakers?

Fuses(937) Miniature Circuit Breakers(1,001) Molded Case Circuit Breakers(922) Motor Protection Circuit Breakers(385) Passive Components(107) Surge Protectors(217) Connectors(411) Earthing and Lightning Protection(1,490) Electrical Distribution (LV)(6,037)

What happens if a circuit breaker blows a fuse?

When the fuse blows, it must be replaced before using the device or appliance again. Circuit breakers work in a similar way to fuses, but they are resettable. Once a fault is detected (this is typically a short circuit or an excessive amount of current flowing through the circuit) the circuit breaker will interrupt the flow of current.

What happens if a circuit breaker trips?

Once a fault is detected (this is typically a short circuit or an excessive amount of current flowing through the circuit) the circuit breaker will interrupt the flow of current. When the circuit breaker trips, it's simply a case of flicking a switch to reset the circuit breaker.

Circuit Breakers, Surge Protectors & Fuses are available at Mouser Electronics. Mouser offers inventory, pricing, & datasheets for Circuit Breakers, Surge Protectors & Fuses.
