CableFree: Wireless Excellence offers high performance 4G & 5G LTE Small Cell Base stations solutions for a wide variety of applications. Covering all common 4G & 5G LTE bands the base ...

It is a small and low-power indoor distributed small base station that provides 5G mobile signal coverage for indoor scenarios through access to fixed broadband, proprietary backhaul, and ...

Experience CableFree's 4G & 5G LTE Small Cell outdoor base stations with software-defined radio for great flexibility, high performance & low ...

A small cell is a cellular base station that transmits and receives defined RF signals with low power in a compact solution.

A small cell is a base station device that is much smaller than a traditional macro site in terms of product form, transmit power, and coverage. It can be considered a low-power ...

Our integrated circuits and reference designs help you create small cell base stations ...

CableFree offers Band 46 5GHz LTE Base Station and Outdoor CPE devices for 4G/LTE operation in Unlicensed 5GHz spectrum, enabling smaller operators and private customers to ...

Experience CableFree's 4G & 5G LTE Small Cell outdoor base stations with software-defined radio for great flexibility, high performance & low operation costs.

The higher bandwidth required of 5G connections limits the range of base stations, necessitating a higher density of antennas, especially in ...

Communication 5g small home base station

Our integrated circuits and reference designs help you create small cell base stations that enable multiband operation, higher bandwidth and better system reliability.

The higher bandwidth required of 5G connections limits the range of base stations, necessitating a higher density of antennas, especially in buildings where radio signals have limited penetration.

These "infill" small cells can be deployed on buildings and street lights and fixtures as well as on traditional cell towers. This smaller version gNode B allows for cost efficient deployment.
