In this paper, we have studied the problem of mobile base station placement to meet the critical communication requirements of first responders in an ad hoc public safety ...

At the same time, unusual peaks in traffic load could lead to much higher blocking probability for critical communication. A possible solution for such scenarios is through the use of mobile ...

This document establishes a minimum level and standard configuration of programming for interoperability and common channels into base stations ...

Access to reliable communications services is a key factor in any emergency situation. ASTRI has succeeded in producing a mobile base station that allows for cost-efficient, low-latency, and ...

The base station carried by the movable platform can react to changes in the network in real time, allowing more flexibility and introducing a new degree of freedom for the emergency ...

This document establishes a minimum level and standard configuration of programming for interoperability and common channels into base stations used by public safety in New York State.

An emergency communication system is necessary for first responders, who need to enter areas with no network coverage or damaged network infrastructure due to n

The Emergency Base Station Cabin represents a paradigm shift in telecommunications infrastructure deployment. By combining rapid deployment capabilities, ...

We develop a prototype of a proposed mobile base station and test its operation in an outdoor environment.

Construction of emergency communication mobile base stations
