How far is a 4G base station from a base station?

The typical distance to a 4G and 5G base station in the city is hundreds of meters and in urban areas from a few hundred meters to a couple of kilometers. In rural areas, there are clearly fewer base stations, and sometimes the nearest mast is even ten kilometers away. Generally, however, there are already masts 3-5 km away.

What is a 4G & 5G LTE base station?

Covering all common 4G and 5G LTE bands, the base stations feature software-defined radio, allowing great flexibility of operation and future upgrade paths. The CableFree Advanced 4G and 5G LTE SDR (software-defined radio) Small Cell Base Station - Outdoor Version - is suitable for a wide variety of applications.

Where can I find the location of a 4G or 5G base station?

You can find the locations of the base stations from Cellmapper.netmap service or the customer service of the teleoperator. The typical distance from a 4G or 5G base station in a city is hundreds of meters, and in a suburban area, it ranges from a few hundred meters to a couple of kilometers.

Can I use a narrowband antenna instead of an indoor LTE antenna?

The optional outdoor MIMO antenna (with two wires) or SISO antenna (with one wire) can be installed instead of the supplied indoor LTE antennas for operation at greater distances from base stations. The antennas are to be purchased separately. -- If you know the connection frequency to the base station, it makes sense to use a narrowband antenna.

Install the UScellular(R) Outdoor Receiver When you have found an ideal location, you will mount the UScellular Outdoor Receiver on the window and complete the cabling.

This guide will walk you through downloading the Ooma Setup app, The easiest way to set up your Base Station is to download the Ooma installing the Base Station, and creating your ...
