What are the structural requirements for a kitchen cabinet?

5.1 General Structural Requirements: The cabinet layout must be simple, rational, and ergonomic, ensuring ease of use and maintenance. The cabinet should have an attractive design with a coordinated color scheme, meeting operational personnel's visual and functional needs.

What are the different types of power integrated cabinets?

Types of Power Integrated Cabinets: 2.1 By Front Door Structure: Embedded Door: The cabinet's front door is within the projection range of the cabinet's main body. Outer-hanging (Covering) Door: The front door protrudes outside the cabinet's main body dimensions.

What are the cabinet door and lock requirements?

5.3 Door and Lock Requirements: Cabinet doors should open and close smoothly, with a minimum angle of 120° and be securely locked. Multi-point locking systems are required for additional safety. The lock protection grade should be at least equal to the protection level of the cabinet.

What temperature should a cabinet be stored at?

For long-term storage, the environmental temperature should range from -10°C to 55°C. 1.3 Other Operational Conditions: The cabinet should not be exposed to explosive, corrosive, conductive, or insulating-damaging substances, nor should there be excessive mold growth.

The article introduces the design requirements and standards of Anstorm power cabinets. Including the use environment, dimensions ...

Installation Requirements for Power Distribution Panels (Cabinets): Power distribution panels (cabinets) shall be made of non-combustible materials. ...

Emphasize cabinet quality during building electrical installation by selecting reliable products to prevent common issues at the source. ...
