-----

Increase velocity in omnidirectional (INVELOX) is the wind power transporting system, which is suitable for providing the maximum wind energy for better maneuver of wind ...

A new concept in wind power harnessing is described which significantly outperforms traditional wind turbines of the same diameter and aerodynamic characteristics under the same wind...

This paper seeks to review and simplify the advances done by various scholars towards improving the INVELOX delivery system. It ...

This paper seeks to review and simplify the advances done by various scholars towards improving the INVELOX delivery system. It provides the mathematical foundation on ...

Instead of capturing bits of energy from the wind as it passes through the blades of a tall erected rotor, INVELOX technology captures wind through a funnel system and directs it through a ...

the hallmark of today's wind power industry. They are also expensive, unwieldy, inefficient, and hazardous to people and wildlife. The second innovative feature of INVELOX is that it captures ...

SheerWind's INVELOX(TM) system (named for INcreased VELOCITY) is a cost effective, high performance electrical energy generation system. The funnel shaped shroud system captures ...

The first wind power generation system, namely INVELOXTM, with three turbines is presented in this paper. This breakthrough technology is often referenced as "The New Face of Wind ...

INVELOX is a ducted wind turbine (DWT) consisting of an omnidirectional intake and a Venturi section. The INVELOX original design was found to have multiple points of high ...

power generation system known as INVELOX, are presented. This patented technology. significant improvement in the Kinetic Energy hence power output of Turbine.

The objective of this work is to design and modeling of an Invelox turbine and to understand l fluid flow pattern and analysis inside the Invelox where the wind turbines are ...
