Should Nepal follow the 5G spectrum band?

As for Ntc, the 2.6 GHz band is to be used for the trial only and there is no confirmation on which airwaves it will get for commercial service. Considering the device ecosystem and our small market, Nepal should always follow the 5G spectrum band which is ubiquitously available. Are we at a 5G demanding state?

How many 5G operators are there in Nepal?

By February 2022, there were 427 operators in 137 countries/regions with 5G (GSA). People here have also started to demand 5G service here in Nepal. With the initiation of such demand, we are going to discuss everything about 5G network in Nepal now after Ntc, one of the operators has already started the trial.

Which 5G frequency should be used in urban areas?

Two 5G frequencies, FR1 (3.5 GHz) and FR1 (28 GHz) were evaluated for the link budget. Combining the frequencies gave better results for capacity and coverage, and complements each other in urban areas. In suburban areas, using millimeter-wave was not cost-effective, and only macro-RRUs were used to maintain the required average data rate.

Is Nepal Telecom ready for 5G?

At the moment, Nepal Telecom (Ntc) has started a 5G trial for insiders. Soon, the public will have access to it. Smartphones with 2600 MHz band (n41) support will connect to Ntc 5G. Likewise, Ncell is awaiting approval from Nta for its own 5G goals while the company's CEO Andy Chong has already stated that it's ready for the trial.

At the moment, NTA and Ntc are in a dialogue to decide on how the telco can be given frequency again for 5G launch on a policy level. Ntc has asked NTA to provide ...

Nepal Telecom is preparing to launch 5G in Kathmandu and Pokhara, pending spectrum approval from the NTA. The operator plans selective SA-5G deployment in high ...

Mobile network operators (MNO) have begun rolling out 5G networks alongside 4G cellular networks in

lower frequency and mid-frequency bands (i.e., 3-6 GHz) all over the world. The ...

This document summarizes a research paper about 5G coverage planning for an urban area in Kathmandu, Nepal. It discusses how 5G networks ...

Two 5G frequencies, FR1 (3.5 GHz) and FR1 (28 GHz) were evaluated for the link budget. Combining the frequencies gave better results for capacity and coverage, and ...

Frequency bands for 5G New Radio (5G NR), which is the air interface or radio access technology of the 5G mobile networks, are separated into two different frequency ranges.

The NTA has allocated the telecom operator a frequency of around 2600 MHz or 2.6 GHz. As a mid-band 5G frequency, the ...

This paper describes about the signal characteristics at 800MHz, 1800MHz for 4G and at 700MHz, 2300MHz, 2600MHz, 3500MHz for 5G and the upgradation of 4G towards 5G ...

Here are the different frequency bands of all cellular mobile technologies in Nepal, from 2G, 3G, 4G, 5G, CDMA and WiMAX, updated in 2024.

This document summarizes a research paper about 5G coverage planning for an urban area in Kathmandu, Nepal. It discusses how 5G networks use higher frequency bands like millimeter ...

This paper describes about the signal characteristics at 800MHz, 1800MHz for 4G and at 700MHz, 2300MHz, 2600MHz, ...

This map represents the coverage of 2G, 3G, 4G and 5G mobile networks in Kathmandu, Kathmandu Metropolitan City, Bagamati Province. See also : mobile bitrates map in ...
