-----

Muscat: The Oman Electricity Transmission Company (OETC) has recorded notable progress this year in implementing a package of strategic projects aimed at expanding ...

It will produce silicon feedstock for solar panels, semiconductors, and modules. The project is expected to connect to the OETC network via the Sohar Freezone 400kV grid ...

Trade Links & Services (TLS) successfully energizes a 400-kilovolt grid station in Manah, Oman, costing over RO 13 million, to transmit renewable energy from the Manah Solar ...

The investment, detailed in OETC's latest report, will support Oman's growing renewable energy ambitions, enabling efficient integration, transmission, and dispatch of solar ...

These projects are expected to cut carbon emissions by more than 1.9 million tonnes annually and include the connection of three wind power plants with a combined ...

The whole project aims to evacuate power from the Manah solar power plants through the main transmission network, in order to ...

This achievement, which involved connecting five major grid stations via overhead transmission lines spanning 670 kilometers, has allowed the Main Interconnected System (MIS) to stretch ...

The whole project aims to evacuate power from the Manah solar power plants through the main transmission network, in order to ensure the achievement of sustainable ...

One of the major focus areas among these projects is the Phase II of the North-South Interconnection Project,
