The IEA-PVPS 2025 Snapshot of Global PV Markets reveals a pivotal moment for solar power: global PV capacity surpassed 2.2 TW, ...

Installed capacity surged to a new high with 597 GW added worldwide, a 33% jump over 2023. From advanced materials like ...

In this article, we'll cover the most significant solar energy trends that will shape the industry's future, offering actionable insights that can help you navigate changes and optimize ...

As of 2025, solar panels cover over 6,000 square miles globally, according to the International Energy Agency. Every day, 2.5 square miles of solar panels are being installed, ...

In this article, we'll cover the most significant solar energy trends that will shape the industry's future, offering actionable insights that ...

Solar and wind are beating new power demand, steelmaking is slowly getting off coal, and more clean energy victories are clear in these charts.

For supporters of the energy transition, 2025 had plenty to complain about: the scrapping of U.S. clean energy policies, wind droughts in Europe, corporate retreats from wind ...

More than 500 GWdc of PV are expected to be installed in 2025. At the end of 2024, China and the U.S. had collectively installed more than 1 TWdc of PV. In 2024, wind and ...

The IEA-PVPS 2025 Snapshot of Global PV Markets reveals a pivotal moment for solar power: global PV capacity surpassed 2.2 TW, with more than 600 GW installed in 2024 ...
