Selecting glass for a project is an important and sometimes difficult task, to assist in this process G.James offers the following recommendation for viewing glass samples.

Solar Energy Absorptance (A_e , %) is the percentage of the sun's energy that is absorbed by glass. Solar Factor or Total Solar Energy Transmittance or g-value (g%) is the total solar ...

Transmittance through five types of commercially sold plate glass (5 mm thick) was measured over the wavelength range from 250 nm to 2500 nm. The results show that while ...

Solar Energy Absorptance (A_e , %) is the percentage of the sun's energy that is absorbed by glass. Solar Factor or Total Solar Energy Transmittance or ...

Glass manages solar heat radiation by three mechanisms: reflectance, transmittance and absorptance. Absorptance - the proportion of solar radiation absorbed by the glass.

Glass manages solar heat radiation by three mechanisms: reflectance, transmittance and absorptance. Absorptance - the proportion of solar ...

The level of solar radiation incident on a surface is defined by the combination of its orientation, the solar azimuth and the solar altitude. At high sun angles ($>40^\circ$), the type of glass used ...

In complementarity to solar control glass in double or triple glazing, Low-E glass significantly reduce heat loss to the exterior, saving the energy need for internal heating.

Definition: It represents the proportion of solar energy that passes through the glass. Range: For thin-film glass, the solar factor typically ranges from 10% to 40%.

The solar factor g is the ratio between the solar energy that manages to pass through the glass entering the environment and the total solar energy that strikes the outer ...

It is a factor on a scale from 1 to 0. Where 0 represents no solar gain and 1 represents maximum solar gain. For residential schemes a g -value of 0.5 ...

It is a factor on a scale from 1 to 0. Where 0 represents no solar gain and 1 represents maximum solar gain. For residential schemes a g -value of 0.5 is optimum. Reducing the g -value to ...
