-----

As grid constraints, policy changes, and financing models evolve, Europe's solar energy growth will remain robust, positioning the EU as a global leader in renewable energy.

Solar power consists of photovoltaics (PV) and solar thermal energy in the European Union (EU). Solar power is growing in every EU country.

Our modelling shows, that by 2030, smart solar building solutions could meet more than half of EU daily energy system flexibility needs, and a third of its annual flexibility needs. ...

More than a third of Dutch homes have switched to solar - a remarkable achievement that puts its streets ahead of every other country in Western Europe, despite having a similar climate to ...

The report underscores solar's increasing role in securing energy independence and meeting climate targets. Germany, Spain, and ...

France is Western Europe's third-largest solar market, with around 20GW of capacity in operation, and 3.1GW of new capacity added in 2023.

The report underscores solar's increasing role in securing energy independence and meeting climate targets. Germany, Spain, and Italy continue to lead the charge, but ...

The European solar market slows to 65.5 GW of new installations in 2024, marking just a 4% growth compared to 2023. Explore the challenges and future outlook for solar ...

The EU has doubled its solar capacity in the last three years. How have subsidies made this possible, what

support is still available, and what still needs to happen?

SolarPower Europe is the award-winning link between policymakers and the solar PV value chain. Get to know the SolarPower Europe team working to transform the European ...

According to the EU's Solar Energy Strategy, this includes training enough workers to manufacture, install, and maintain solar power systems, as well as modernizing the ...

The EU has doubled its solar capacity in the last three years. How have subsidies made this possible, what support is still available, ...
