-----

The Loren School project serves as an example of how integrating solar technology with urban green spaces can create energy-efficient and environmentally resilient ...

Norway's eastern region, including the capital city of Oslo, showed the highest potential for solar PV installations. However, the research goes beyond these technical ...

In June 2024, Ullevaal Stadium in Oslo became home to the world's largest vertical solar panel installation on a roof, placing the stadium at the forefront of renewable energy ...

The recent reveal of the world's largest vertical rooftop solar energy system at Ullevaal Stadion in Norway marks a significant milestone in solar technology.

Norway is now home to the world's largest rooftop solar panel system with vertical panels. It sits atop the national football (soccer) stadium, Ullevaal Stadion.

Loren Elementary School in Oslo has taken a significant step toward sustainability by integrating solar energy technology with its existing green roof. The challenge was to install ...

The Loren School project serves as an example of how integrating solar technology with urban green spaces can create energy ...

Norway's rooftops may hold the key to a greener future. A new study reveals the country's buildings could generate vast amounts of solar power--enough to transform its ...

Over Easy Solar's innovative approach, we have helped it achieve the world's largest vertical panel installation on the existing roof of a football stadium.

In June 2024, Ullevaal Stadium in Oslo became home to the world's largest vertical solar panel installation on a roof, placing the ...

The Ullevaal Stadion in Oslo has been equipped with something the national team might envy: a game-changing renewable energy facility. Installed in May 2024, it is currently ...

A new research paper has calculated the technical potential of installing Rooftop PV System or BIPV Facade across Norway and the feasibility of integrating the power into the ...
