Can a fuel cell bus run a hydrogen station in Tokyo?

The hydrogen station can be used by hydrogen-powered Toei Bus services, which are operated by the Tokyo metropolitan government, as well as by general fuel cell vehicles. A fuel cell bus is supplied at a newly opened hydrogen station in Chuo Ward, Tokyo, on Wednesday. Add TheJapanNews to your Google News feed.

Why is Tokyo expanding its EV infrastructure with citywide battery swapping?

For electrification to work at scale, energy solutions must be fast, reliable, and space-efficient. That's why Tokyo is expanding its EV infrastructure with citywide battery swapping.

Who is responsible for Tokyo's hydrogen station?

Major oil distributor Eneos Corp. is accountable for the station's operations and hydrogen production, in accordance with Tokyo government's vision for the site. This development will provide a hydrogen supply sufficient for roughly 40 fuel cell buses daily operations.

Why does Tokyo need a battery swapping network?

Because batteries charge gradually at the station rather than drawing high loads from the grid, swapping also reduces strain on Tokyo's energy infrastructure while ensuring a steady supply of power. This expansion of Ample's swapping network will provide additional coverage and capacity, with each station able to support over 100 vehicles.

The Senju station is the first commercial hydrogen refueling station using AEM electrolysis in Asia. Here, the Enapter electrolysers used to produce green hydrogen on-site are 8-bar pressure ...

The project will utilize diverse renewable energy sources, fuel cells and food waste-derived biogas systems for the realization of a future hydrogen society.

According to the Tokyo metropolitan government, this is the first time in Japan for hydrogen to be supplied to an entire area in the city. Hydrogen is converted to electricity by ...

The Senju station is the first commercial hydrogen refueling station using AEM electrolysis in Asia. Here, the Enapter electrolysers used to produce ...

From streetcars powered by renewable energy to fuel cell buses running on hydrogen, the city offers a real-world testing ground for sustainable urban mobility solutions. In ...

Each modular station is designed to be compact and quickly deployable, making it ideal for urban environments.

Tokyo Century will invest in four wholly-owned extra high-voltage grid-scale battery storage projects totaling 101MW/386.3MWh, the company announced on December 12, 2025. ...

Kamigumi, Toyota L& F, and SKM to build Umi no Mori Hydrogen Station at Tokyo Port for fuel cell forklifts, trucks, and buses, opening in 2027.

According to the Tokyo metropolitan government, this is the first time in Japan for hydrogen to be supplied to an entire area in the city. ...

From streetcars powered by renewable energy to fuel cell buses running on hydrogen, the city offers a real-world testing ground for ...

Now, that success is coming to Tokyo. Ample's modular swapping stations are designed for rapid deployment, requiring no major construction and going live in just three ...

One of Japan's most significant hydrogen refueling stations for fuel cell vehicles has started operations at the former Tokyo Olympics and Paralympics athletes village site, ...
