Supercapacitors offer rapid charging and high power, while lithium-ion batteries excel in energy density and storage. This article ...

Lithium-ion capacitors - also called asymmetric capacitors or superbatteries - are typically based on a graphite or  $\text{Li}_2\text{Ti}_5\text{O}_4$  negative electrode (the faradaic electrode) and an activated ...

Supercapacitors offer rapid charging and high power, while lithium-ion batteries excel in energy density and storage. This article compares their key features.

Activated carbon is typically used as the cathode. The anode of the LIC consists of carbon material which is often pre-doped with lithium ions. This pre-doping process lowers the ...

"Future lithium-ion capacitor design and competitive position" takes 25 information-packed pages to reveal these specific constructions from the smallest electronics components ...

The review paper summarizes the latest research and findings in the field of lithium-ion capacitor technology for the first time.

Lithium-ion capacitors (LICs) consist of a capacitor-type cathode and a lithium-ion battery-type anode, incorporating the merits of both components. Well-known for their high ...

High accurate inter-cell voltage balance control. Enables fast charge/discharge at high current. High energy density for compact light ...

OverviewHistoryConceptPropertiesComparison to other technologiesApplications

LICAP Technologies Inc. (LICAP) is a world-class manufacturer of supercapacitor and lithium-ion capacitor products with market-leading performance.

Efforts to blend the characteristics of supercapacitors and Li-ion batteries have resulted in a hybrid supercapacitor called the Li-ion capacitor (LiC). This increases the ...
