What is a shipping container battery?

It is a large-scale energy storage system housed within a shipping container. These batteries are designed to store and discharge large amounts of electricity, often generated from renewable sources such as solar or wind.

What is battery labeling?

Batteries and battery containing products bear a variety of labels, symbols, and markings to comply with existing U.S. and international requirements. In the United States, battery labeling involves both mandatory and voluntary standards, certifications, and regulations that are not always consistent, but continue to grow in number.

Do batteries have chemistry on their labels?

Consistent across all three EPR laws is the requirement that batteries sold within the state include the battery chemistry on the label, as well as symbols or indicators signaling that consumers should not dispose of the batteries as household waste.

Do batteries need to be labeled?

Existing labeling requirements in the United States, the EU, and Japan include messaging and/or symbols indicating that batteries and battery-containing products should be recycled, but battery labels do not provide clear instructions for users to determine where or how batteries should be collected.
