America had 15.5 gigawatts of battery energy storage at the end of 2023, 97 times as much as in 2014 and 72% more than at the end ...

The US Energy Information Administration (EIA) projects 32.5 GW of solar, 18.2 GW of energy storage, and 7.7 GW of wind will be ...

Solar and wind now make up more than 20% of total US electrical generating capacity, according to new data from the Federal Energy Regulatory Commission (FERC).

America had 15.5 gigawatts of battery energy storage at the end of 2023, 97 times as much as in 2014 and 72% more than at the end of 2022, helping to support the use of more ...

In 2024, the world added 585 GW of new renewable energy capacity, an all-time high, with wind and solar accounting for 96.6% of the total.

Pumped storage (note that this is included in total hydropower capacity, but not in total renewable capacity)
Marine energy Wind energy ...

Specifically, the EIA projects the deployment of 32.5 GW of solar capacity, 18.2 GW of energy storage, and 7.7 GW of wind ...

Solar and wind now make up more than 20% of total US electrical generating capacity, according to new data from the Federal ...

The Energy Information Administration projects that 32.5 GW of solar power, 18.2 GW of energy storage,

and 7.7 GW of wind ...

The Energy Information Administration projects that 32.5 GW of solar power, 18.2 GW of energy storage, and 7.7 GW of wind generation will be deployed this year, accounting ...

As the world transitions away from fossil fuels to renewable energy, there is a pressing need to develop energy storage assets that can provide power when the sun is not ...

Solar and battery storage continue to set installation records, while wind energy has plateaued. Solar surpassed 2023's record installations in 2024, adding an estimated 39.6 ...
